

Q1. Calculate Amount Based on Quantity

```
X, Y, Z = map(int, input().split())
```

```
if Z <= 50:  
    print(X)  
else:  
    print(X + (Z - 50) * Y)
```

Q2. Content Creator Payout Eligibility

```
views = int(input())  
retention_percent = int(input())  
is_original = input()  
is_enrolled = input()  
copyright_strike = input()  
  
if copyright_strike == "true":  
    print("Not Eligible")  
elif is_enrolled == "false":  
    print("Not Eligible")  
elif is_original == "false":  
    print("Not Eligible")  
elif views >= 100000 and retention_percent >= 50:  
    print("Eligible - Premium Payout")  
elif views >= 100000 and retention_percent < 50:  
    print("Eligible - Standard Payout")  
elif views >= 10000 and retention_percent >= 60:  
    print("Eligible - Standard Payout")  
elif views >= 10000 and retention_percent < 60:  
    print("Eligible - Minimum Payout")  
else:  
    print("Not Eligible - Below Threshold")
```

Q3. Transportation Fare Calculator

```
distance_km = float(input())
